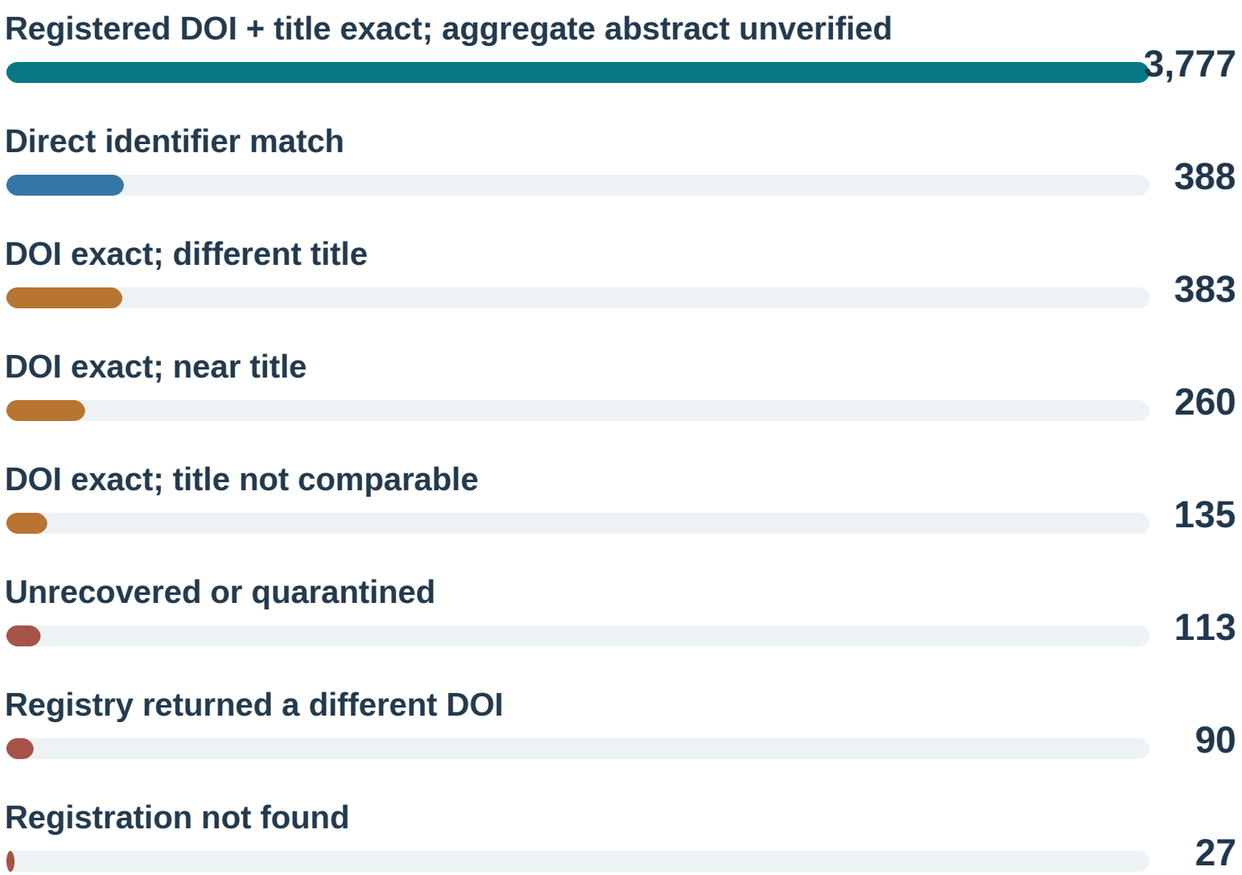
S4 Publication identity is not abstract identity

5,173 exact-identifier recovery requests; mutually exclusive classification

RECONCILIATION OUTCOMES (NUMBER OF REQUESTS)



Classified requests

5,173

5,005 metadata gaps + 168 abstract gaps

WHY VERIFICATION MATTERS

Requested publication version

DOI A · specific publication or release
An exact-version question

↓

OpenAlex aggregated work
Preferred DOI may refer to a different version
An abstract can be work-level rather than version-level

↓

Crossref / DataCite lookup
Registered DOI and title can corroborate identity
They do not authenticate the aggregated abstract

0 aggregate abstracts promoted
Unresolved title / version conflicts remain review-only

Reconciliation verified request identities, not scientific inclusion or abstract-version equivalence.
